Summary

Final-year B.Tech student in AI & Data Science at IP University (CGPA: 8.4) with experience in Machine Learning (ML), frontend development, and data structures & algorithms. Solved 1030+ DSA problems with hands-on experience building ML models and React-based web applications.

Technical Skills

Programming Languages: Java, JavaScript, Python, SQL, HTML, CSS.

Libraries/Frameworks: Pandas, NumPy, Matplotlib, Scikit-learn, Seaborn, React, PyTorch, OpenCV, TF-IDF, AI

Core Concepts: Data Structures and Algorithms, Machine Learning, OOPs, Frontend Development, Feature Engineering.

Platforms: Jupyter Notebook, Visual Studio Code, IntelliJ IDEA, Git, GitHub, Google Colab, Excel, MySQL.

Projects

E-mail Spam Detection | Supervised learning Naive Bayes, Jupyter Notebook, pandas, numpy, matplotlib [GitHub](#)

- Built a Naive Bayes spam detection model trained on 8,000+ emails, achieving 96.8% accuracy and 1.0 precision.
- Optimized text preprocessing using TF-IDF and NLP techniques, then deployed the model via Streamlit with instant prediction support.

Medical Insurance Cost Prediction | Supervised learning SVM, Linear Regression, Numpy, Scikit-learn, Streamlit [GitHub](#)

- Developed an SVM-based insurance cost prediction system trained on 1K+ healthcare records with 95.0% accuracy and 0.94 precision.
- Engineered preprocessing pipelines for features like age, BMI, smoking status, and medical history, integrated into a Streamlit web app for instant predictions.

Movie Recommendation System | Jupyter Notebook, TF-IDF, Numpy, Scikit-learn, ML, Streamlit [GitHub](#)

- Designed a content-based movie recommendation engine using TF-IDF vectorization and cosine similarity on 5,000+ movies metadata records.
- Improved recommendation by analyzing genres, keywords, and release years to generate personalized movie suggestions.

Face Recognition System | Unsupervised learning, OpenCV, dlib-library, Python, Scikit learn, Streamlit [GitHub](#)

- Built a real-time face recognition system using OpenCV and dlib for facial encoding and identity matching.
- Automated attendance tracking with timestamp-based logging for 100+ facial identity records, reducing manual tracking effort.

Nature Nest Clone | VS-Code, HTML, CSS, Tailwind, JavaScript, React [GitHub](#)

- Developed a responsive tourist booking frontend with 10+ reusable React components & seamless multi-page navigation.
- Integrated React Router and Tailwind CSS to improve UI responsiveness across 6+ screen breakpoints and enhance user experience.

Achievements & Certificates

- Solved 1030+ DSA problems (LeetCode: 800+, GFG: 130+, CodeChef: 100+).
- Peak LeetCode Rating: 1812, CodeChef: 3★ (Max Rating: 1630).
- **JPMorgan Chase Software Engineering:** Virtual & Job Simulation (SDE) [Credentials](#)
- **Oracle Cloud Infrastructure (OCI) Foundations:** Generative AI [Credentials](#)
- **Deloitte Australia:** Virtual Experience (Data Analytics) [Credentials](#)
- **AWS Machine Learning Fundamentals :** ML & Data Fundamental [Credentials](#)

Education

Bhagwan Parshuram Institute of Technology (IP University, Delhi)

B.Tech in Artificial Intelligence and Data Science, CGPA: 8.4

2022 - 2026

Delhi, India

Government Senior Secondary School, Vallabh Nagar

12th in PCM, Percentage: 89.00

2019 - 2020

Udaipur, India
