Summary

Final-year B.Tech AI & Data Science student at IP University (CGPA: 8.23) with hands-on experience building ML models (Naive Bayes, SVM, Linear Regression) and React-based web applications. Solved 1030+ DSA problems. Seeking roles in ML Engineering, Data Science, or Frontend Development.

Technical Skills

Programming Languages: Java, JavaScript, Python, SQL, HTML, CSS.

Libraries/Frameworks: Pandas, NumPy, Matplotlib, Scikit-learn, Seaborn, React, PyTorch, OpenCV, TF-IDF

Core Concepts: Data Structures and Algorithms, Machine Learning, OOPs, Frontend Dev, Feature Engineering.

Platforms: Jupyter Notebook, Visual Studio Code, IntelliJ IDEA, Git, GitHub, Google Colab, Excel, MySQL.

Experience

Syntax World,Digital Solution

June 2025 – July 2025

Web Developer Intern

Delhi, India

- Architected & delivered a fully responsive tourist booking frontend (Nature Nest) from scratch using React, Vite, CSS.
- Implemented React Router for multi-page navigation across product, cart, and checkout components, reducing page transition time and eliminating full page reloads entirely.
- Collaborated in a team environment responsible for end-to-end UI consistency across 6+ responsive breakpoints.

Projects

E-mail Spam Detection | Navie Bayes, Jupyter Notebook, pandas, numpy, sklearn, matplotlib, streamlit

[GitHub](#)

- Developed an E-Mail Spam Detection Model which detects Spam mail based on written content in mail.
- ML classifier achieving 96.8% accuracy (precision: 1.0). Deployed via Streamlit for real-time text classification.

Medical Insurance Cost Prediction | Linear Regression, Jupyter Notebook, numpy, sklearn, streamlit

[GitHub](#)

- A data-driven approach to estimate future healthcare expenses for individuals or groups. Uses factors like age, health status, and medical history to forecast insurance premiums and potential claims.
- SVM classifier achieving 95.0% accuracy (precision: 0.94).Deployed via Streamlit for real-time cost prediction.

Movie Recommendation System | Jupyter Notebook, TF-IDF, numpy, sklearn, streamlit

[GitHub](#)

- The system uses the content-based filters to recommend movies by employing the libraries like Pandas & Scikit-learn.
- The system analyzes the genre of movies and uses cosine similarity to provide recommendations based on the user preferences and years selected.

Face Recognition System | Jupyter Notebook, OpenCV, dlib-library, python, sklearn, streamlit

[GitHub](#)

- This project,real-time face recognition is performed using the OpenCV library & pretrained deep learning model.
- The system converts the faces into numbers and compares them with the database & recognize the person and then It stores names, dates, and times in electronic form.

Nature Nest Clone | VS-Code, HTML, CSS, Tailwind, JavaScript,React

[GitHub](#)

- Built a responsive Tourist guide Fronted website using ReactJs to deliver a smooth booking experience.
- Used React Router for navigation of products pages, cart components, and checkout components. Added sleek, modern designs by employing Tailwind CSS.

Achievements & Certificates

- Solved 1030+ DSA problems (LeetCode: 800+, GFG: 130+, CodeChef: 100+).
- Peak LeetCode Rating: 1630, CodeChef: 2★ (Max Rating: 1471).
- **JP Morgan Chase Software Engineering:** Virtual Experience & Job Simulation (SDE)
- **Oracle Cloud Infrastructure (OCI) Foundations:** Generative AI
- **Deloitte Australia:** Virtual Experience (Data Analytics)
- **AWS Machine Learning Fundamentals :** ML & Data Fundamentals

Education

Bhagwan Parshuram Institute of Technology (IP University,Delhi)

2022 - 2026

B.Tech in Artificial Intelligence and Data Science, CGPA: 8.23

Delhi,India

Government Senior Secondary School,Vallabh Nagar

2019 - 2022

12th in PCM, Percentage: 89.00

Udaipur,India
